

Service Body

Built to a heavy-duty specification to ensure they can handle the rigors of day to day use our Service Bodies are designed for the tradesman that requires lockup storage for parts and tools, while still having useable room down the middle of the tray for longer objects. Designed to fit all light commercial vehicles from Dual to Single Cab Utes.

Fabricated with the same design method as our Heavy-Duty Aluminium Tray the Service Body utilises a combination of galvanised steel and aluminium. With lockers constructed from 3mm flat aluminium, and then all surfaces powder coated with our standard colours of white or satin black. Combining a 3-point locking system, which can be adapted for central locking ensures all your items are kept safe and with the following list of standard features, it is unsurpassed for value and quality.

DURABLE CONSTRUCTION

WEATHERPROOF

12 MONTH WARRANTY
